KAMALDEEN OJURE

Aberdeen, AB24 5AX, UK | +44 7350167499 | kamalojure@gmail.com

PROFILE

Full stack developer with 3+ years building secure, production grade web applications and APIs in agile teams. I have shipped live payment platforms, learning management systems and assessment tools using PHP/Laravel, C#/.NET Typescript/Next.js with hands-on work in payment gateway integration, authentication and CI/CD (GitHub Actions). I recently completed an MSc in IT with Cyber Security at Robert Gordon University with Distinction, where I built an open-source Python tool that tells security teams which vulnerabilities to patch first, and I bring a security-first mindset to every stage of development.

KEY SKILLS

Languages & Frameworks: PHP, Laravel, C#, TypeScript, Node.js, React.js, Python (pandas, SciPy, Matplotlib)

Cyber Security: Vulnerability management and risk-based patch prioritisation (CVSS, EPSS, CISA KEV, NVD), secure development, authentication and payment security

CI/CD & DevOps: Git, GitHub, GitHub Actions.

Databases: MySQL, MongoDB, Firebase

Frontend: HTML, CSS, JavaScript, AJAX, Tailwind CSS, responsive UI development

Delivery & Collaboration: Scrum, agile delivery.

WORK / RESEARCH EXPERIENCE

Full Stack Developer

Jul 2023 – Aug 2025

Kallif IT Solution, Ikeja, Lagos

- Contributed to multiple software projects in a Scrum-based agile environment, supporting the full development lifecycle from requirements analysis and solution design through implementation, testing, deployment, and post-release improvement.
- Implemented business-critical secure development features, including secure payment gateway integration and multi-login prevention, improving platform security and protecting revenue.
- Built and maintained scalable web application features across backend and frontend systems using PHP/Laravel, C#/.NET, TypeScript/JavaScript, Node.js, and Tailwind CSS.
- Developed and integrated REST APIs and payment services for production systems, delivering secure and reliable transaction workflows.
- Supported CI/CD workflows using GitHub Actions, improving deployment consistency, release speed, and overall software reliability.
- Investigated application issues, performed debugging and error analysis, and implemented fixes and optimisations across live systems.
- Collaborated with teammates on technical architecture, feature design, and code review to enhance system usability, maintainability, and code quality.

Undergraduate Researcher

Jan 2022 – Jul 2023

University of Lagos, Akoka, Lagos

- Analysed nutritional content, sensory evaluation, and chemical composition of dehydrated versus fresh meals.
- Assessed the cost-effectiveness of Refractance Window Dryer technology for food dehydration.
- Submitted and presented thesis findings to the University of Lagos Department of Chemical and Petroleum Engineering.

Engineering Intern

Jun 2021 – Nov 2021

Agata Limited, Iyana-Ipaja, Lagos

- Operated and maintained machinery used in high-quality polythene production.
- Trained in fundamentals of process control and instrumentation, Safety Instrumented Systems, and Distributed Control Systems.
- Managed and optimised the recycling process to minimise waste and maximise resource efficiency.

- Collaborated with cross-functional teams to improve production efficiency and implement sustainable practices.

Front End Developer (Internship) *Feb 2020 – 2021*
Payscribe, Lagos, Nigeria

- Built and maintained responsive, user-facing UI components using HTML, CSS, and JavaScript.
- Collaborated with backend developers and designers to integrate frontend interfaces with APIs and services.
- Gained early hands-on experience with version control (Git) and agile development workflows.

PROJECTS

Risk-Based Vulnerability Prioritisation Tool (MSc Dissertation) — github.com/itz-kamal/vulnerability_analysis

- Open-source tool that tells security teams which vulnerabilities to fix first: an organisation feeds in its list of CVEs, the pipeline enriches each one with severity (CVSS), exploit probability (EPSS) and confirmed-exploitation status (CISA KEV), and returns a ranked remediation queue with a patch-by deadline for every CVE (immediate for KEV, then 7, 30, 90 or 180 days).
- Built the three-stage pipeline (data collection, statistical analysis, priority ranking) in Python (requests, pandas, SciPy, Matplotlib), with rate-limited, batched calls to the NVD and EPSS APIs, data-quality checks, and fully reproducible command-line runs.
- Validated it on 30,974 CVEs published in 2023: CVSS alone correlated only weakly with exploitation likelihood ($r = 0.155$), while the top 5% of the tool's queue contained 84.2% of confirmed-exploited CVEs, against 9.7% for CVSS-only ranking.

LensVault — Camera Equipment Rental Platform (MSc Coursework) — github.com/itz-kamal/lensvault

- Built a full-stack rental platform for cameras, lenses, drones and lighting using object-oriented PHP, MySQL, JavaScript (Fetch API) and Tailwind CSS; customers browse equipment by category, book rentals with date and stock validation, and track active and returned rentals.
- Developed an admin dashboard for managing equipment, users and support messages, with live statistics and overdue-rental tracking; applied secure coding practices including bcrypt password hashing, prepared statements against SQL injection, session ID regeneration on login and file-type checks on image uploads.

myequalx.com — Gift Card Trading & Bills Payment Platform

- Built and maintained a live production platform for secure trading and payments; backend in C#/.NET (secure payment gateway integration, multi-login prevention) with a Next.js/TypeScript frontend, focused on scalability and reliable transaction handling.

zptraining.com — Educational Course Learning Platform

- Designed and implemented a learning management system supporting course delivery, progress tracking, and certification, using PHP/Laravel for the backend/APIs and Next.js/TypeScript for a responsive frontend.

learnigh.mobileacademy.ng — Student CAT Study Platform

- Built a platform for educational assessments and study resources using React.js/TypeScript, Zustand, PHP/Laravel, and MySQL, delivering reliable data management and end-to-end web application development.

https://github.com/itz-kamal/safedose.git — Pharmacy Inventory System

- Built a pharmacy inventory management system for tracking medicines, stock levels, and inventory records, using HTML/CSS, JavaScript, AJAX, PHP, and MySQL, with a focus on efficient inventory management and reliable data handling.

EDUCATION

MSc, IT with Cyber Security — Distinction *Sept 2025 – Dec 2026*
Robert Gordon University, Scotland
Dissertation: Vulnerability Disclosure Timeline Analysis: Time-to-Patch vs Exploitation Risk

BSc, Chemical Engineering *Dec 2016 – Sept 2023*
University of Lagos, Akoka, Lagos
